Please be patient, it may take up to one minute to process your credit card.

Accepts VISA, MC, Diner's Club, JCB and Carte Blanche (but not Amex)

Whatever user info is available is populated from the data passed from the previous page.

The unique order number displayed is dynamically generated by the server.

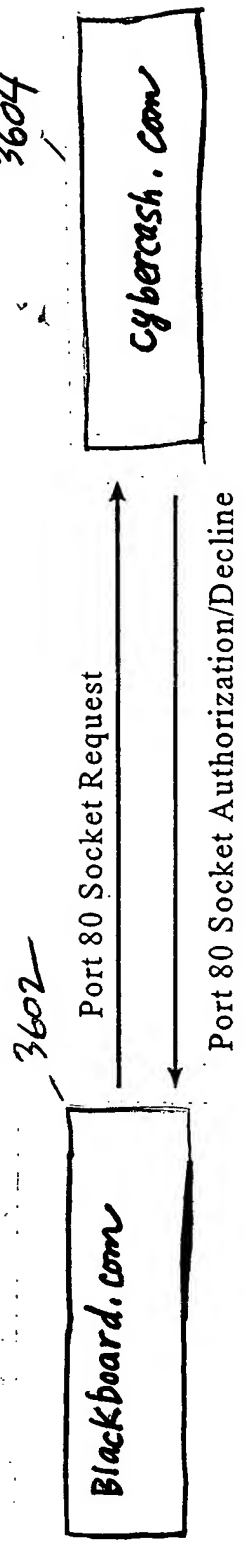

The Chosen services and price displayed are passed in from the previous screen.

The look and feel of this plate (and all butter e-commerce pages) can be modified by an HTML template. This template is selected as one of the script parameters.

**Payment Information**  
Thank you for your purchase. You will find a purchase confirmation number for your purchase on this page, or copy this down for your records. When you are done, click the link below to return to the course.

**Confirmation Details**  
Purchase Confirmation Number: 3702

Handwritten annotations: '3702' with an arrow pointing to the Confirmation Details section, and '3700' with an arrow pointing to the 'CLICK HERE TO RETURN TO COURSE' link.

Payment is authorized and queued at Cybercash, Inc for processing.

The payment will go through and appear in Blackboard's Cybercash account within 12 hours.

There is no way that the user can back out at this point without Blackboard issuing a manual refund.

No services are provided yet. The user must follow the link at the bottom of the page, or he will receive nothing for his money.

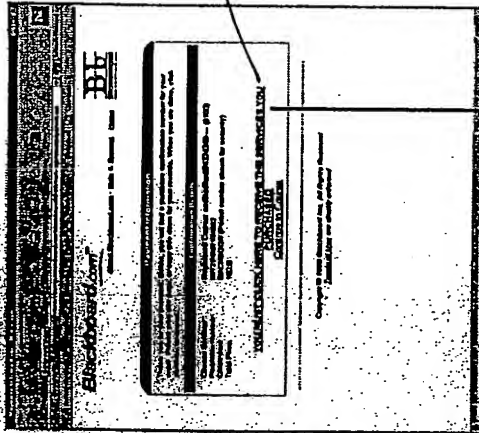

All links on this page are disabled except the one that says "YOU MUST CLICK HERE". This prevents users from failing to get their orders filled.

A authorization code is calculated by the script as a secure hash of the purchase price, the order id, and a secret number.

Figure 37

# Returning to the Originating Server

Butter.blackboard.com

•The link at the bottom of the page points back to the referring server using the location passed in the URL parameter to the first butter script.

•The authorization code, the order\_id and a subset of the credit card digits (show\_card) are passed back as parameters.

•The authorization code should be checked upon return by making an identical hash calculation. If the two hash values match, the order should be fulfilled, otherwise, and error should be shown.
